

CONSISTENCIA DE DATOS EN ESTUDIOS CLÍNICO

Dra. Bettina Müller
Oncóloga Médica
Instituto Nacional del Cáncer
Directora Ejecutiva
GOCCHI

Definiciones

Consistencia: Consistencia interna, indicador indirecto de la fiabilidad de una investigación. (www.wikipedia.org)

Sinónimos: solidez, coherencia

Estudio clínico: Investigación cuyo objeto es el ser humano

“[...] a clinical trial is any research study that prospectively assigns human participants or groups of humans to one or more health-related interventions to evaluate the effects on health outcomes.

Interventions include but are not restricted to drugs, cells and other biological products, surgical procedures, radiological procedures, devices, behavioural treatments, process-of-care changes, preventive care, etc.” (http://www.who.int/topics/clinical_trials/en/)

Conceptos Data Management Estudios Clínicos: Datos Fuente

“All information in original records and certified copies of original records of clinical findings, observations, or other activities in a clinical trial necessary for the reconstruction and evaluation of the trial. Source data are contained in source documents (original records or certified copies)”

Conceptos Data Management Estudios Clínicos: Documentos Fuente

“Original documents, data, and records (e.g., hospital records, clinical and office charts, laboratory notes, memoranda, subjects' diaries or evaluation checklists, pharmacy dispensing records, recorded data from automated instruments, copies or transcriptions certified after verification as being accurate copies, microfiches, photographic negatives, microfilm or magnetic media, x-rays, subject files, and records kept at the pharmacy, at the laboratories and at medico-technical departments involved in the clinical trial).”

Conceptos Data Management Estudios Clínicos Formulario de Reporte de Casos (Case Report Form)

“A printed, optical, or electronic document designed to record all of the protocol required information to be reported to the sponsor on each trial subject.”

Comparación Ficha Clínica vs CRF

Registros tienen la finalidad de documentar la información relevante para la actividad clínica

Poco estandarizado

No anonimizado

Acceso limitado

Objetivo clínico y médico legal

Ficha clínica

Registros tiene la finalidad de capturar los datos relevantes para la investigación

Estandarizado

Anonimizado

Acceso abierto

Sirve como base de datos para generar los data sets para el análisis

CRF

Marco legal ficha clínica

- Artículo 12.- La ficha clínica es el instrumento obligatorio en el que se registra el conjunto de antecedentes relativos a las diferentes áreas relacionadas con la salud de las personas, [...]
- [...] asegurando oportuno acceso, conservación y confidencialidad de los datos, así como la autenticidad de su contenido y de los cambios efectuados en ella.
- Toda la información que surja, [...], será considerada como dato sensible [...].

Marco legal ficha clínica

- Artículo 13.- [...] el prestador será responsable de la reserva de su contenido. [...]
- Los terceros que no estén directamente relacionados con la atención de salud de la persona no tendrán acceso a la información contenida en la respectiva ficha clínica. [...].

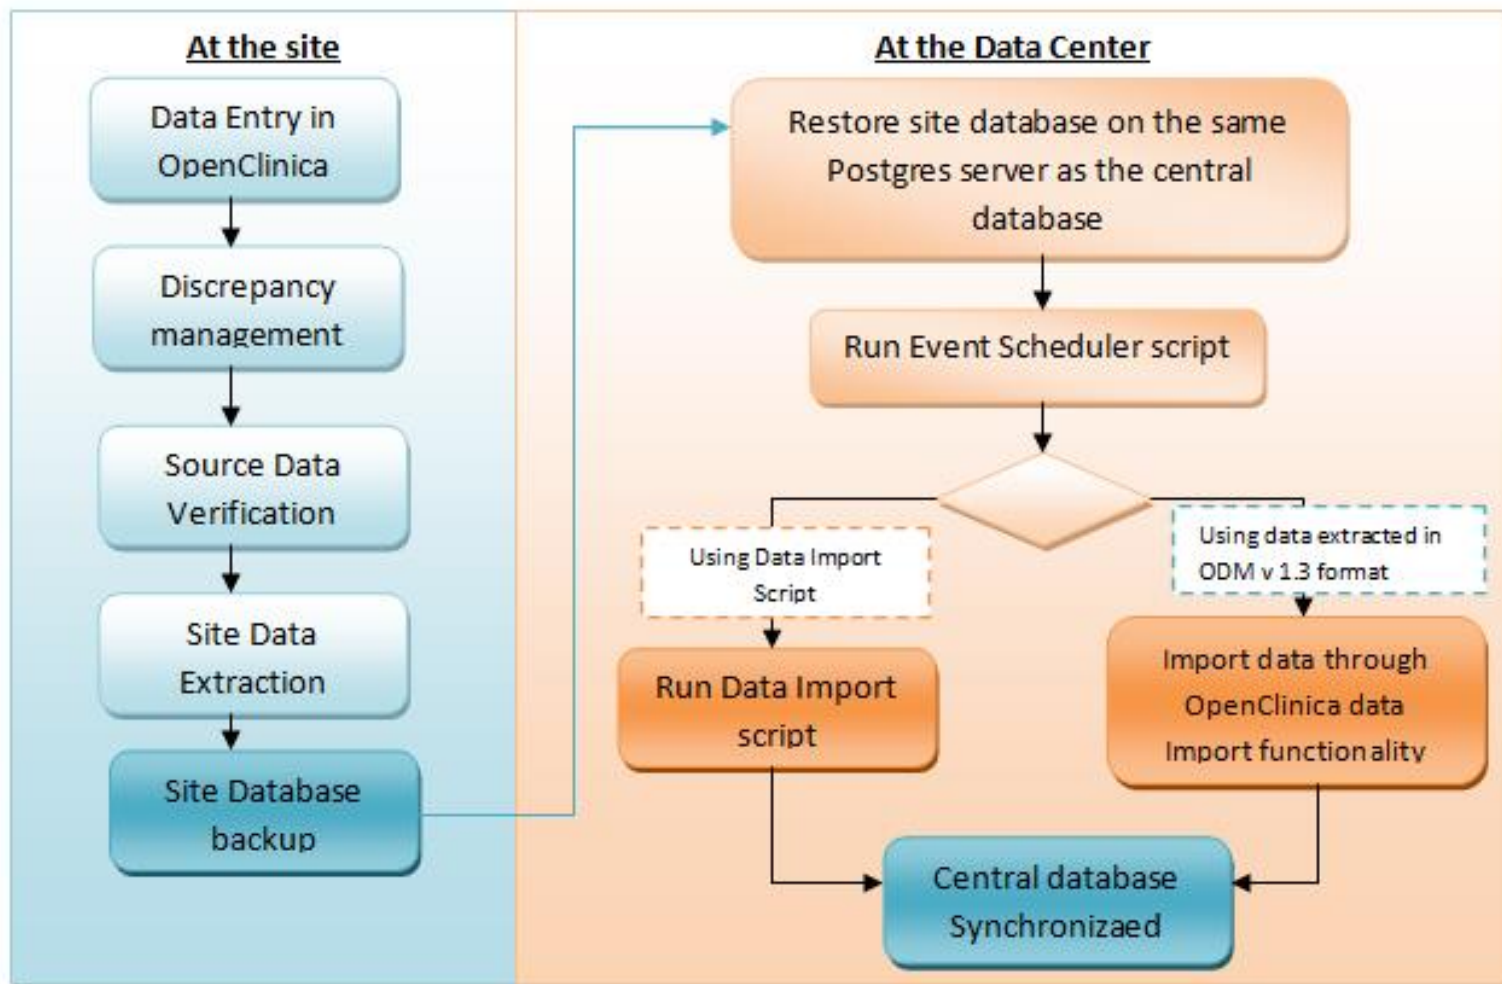

Marco legal CRF

- 4.9 Records and Reports
- 4.9.1 The investigator should ensure the accuracy, completeness, legibility, and timeliness of the data reported to the sponsor in the CRFs and in all required reports.
- 4.9.2 Data reported on the CRF, that are derived from source documents, should be consistent with the source documents or the discrepancies should be explained.

Marco legal CRF

- 4.9.3 Any change or correction to a CRF should be dated, initialed, and explained (if necessary) and should not obscure the original entry (i.e. an audit trail should be maintained); [...]
- The investigator should retain records of the changes and corrections.

Flujo de datos en investigación clínica

Requisitos Datos Fuente

- Atribuible
- Legible
- Contemporáneo
- Original
- Exacto

Diseño Documento Fuente

- Se pueden diseñar hojas de trabajo (“worksheets”) para asegurar que se documenten los datos requeridos (ejemplo: checklist de elegibilidad)
- Si se deben incluir en la ficha clínica (ejemplo: seguimientos) requieren la autorización por parte de la institución

Requisitos CRF

- Deben capturar los datos requeridos para la investigación
- Constituye el primer paso de la traducción de un protocolo de investigación en datos analizables

Diseño CRF

- Un buen diseño de CRF asegurará que se capturen los datos que requiera el protocolo para poder cumplir los objetivos de éste

Consideraciones para un buen diseño de CRF

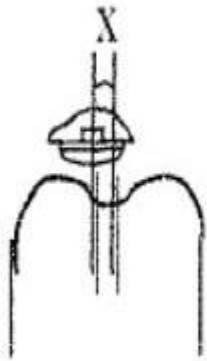

- Desarrollo acorde al protocolo
- Considerar los datos que se requieren para los objetivos planteados
- Incluir a todos los participantes en el desarrollo (investigador, estadístico, data manager, monitor clínico, etc.)

Lo que se debe evitar al diseñar un CRF

- Recolectar datos que no se analizarán
- Recolectar datos redundantes
- Ambigüedad en la interpretación de los campos
- Diseño poco claro, inductor a error
- Falta de consideración de las necesidades de los que trabajarán los datos

Evitar inductores de error

LATERAL DISPLACEMENT (check one)

(1) No
(2) Yes

Distance (in mm)

Elsewhere throughout this study:
1 = Yes
2 = No

- Consistent format throughout study
 - U.S. vs European vs Standard

DON'T:

	1c. Onset Date MMDDYY	1d. End Date MMDDYY
	<input type="text"/>	<input type="text"/>
Date: <input type="text"/>	DD/MM/YY	Recorder's Sign: _____

Evitar ambigüedad

DON'T:

Temperature:	<input type="text"/> <input type="text"/> <input type="text"/> . <input type="text"/> <input type="text"/>	??
Weight:	<input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> . <input type="text"/> <input type="text"/>	
Height:	<input type="text"/> <input type="text"/> <input type="text"/>	

DO:

Temperature:	<input type="text"/> <input type="text"/> <input type="text"/> . <input type="text"/> <input type="text"/>	(°C)	No question
Weight:	<input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> . <input type="text"/> <input type="text"/>	(kg)	
Height:	<input type="text"/> <input type="text"/> <input type="text"/>	(cm)	

Evitar inductores de error

On CRF Page 1:

Date of informed consent □□/□□/□□□□ (DD/MM/YYYY)	Assigned study number □□□□□□□□
---	--------------------------------

On CRF Page 2:

Date of informed consent	□□/□□/□□□□
	DD MM YYYY
Assigned study number	□□□□□□□□

Issues:

1. What if these are different on the 2 pages?
2. Assigned study number:
 - Page 1, length = 6;
 - Page 2, length = 9

Evitar tener que presumir datos

ADVERSE EVENTS LOG								
AE #	Event	Onset of Event Date (DD/MM/YYYY) and Time (24-hour clock)	Resolution of Event Date (DD/MM/YYYY) and Time (24-hour clock)	IRAE	Severity	Relation to Device	Device Discontinued	Outcome
1		Date: _____ Time: _____ OR <input type="checkbox"/> N/A	Date: _____ Time: _____ OR <input type="checkbox"/> N/A	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
		Corrective Action (please record): <input type="checkbox"/> N/A <input type="checkbox"/> None						
2		<div style="border: 2px solid red; padding: 5px;"> <p style="text-align: center; color: red; margin: 0;">No Indicator Q</p> <p style="color: red; margin: 0;">If no AE Log received/entered:</p> <ul style="list-style-type: none"> No record in database for that patient Forced to make "assumptions" about the data (AE = safety data!) </div>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3					<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

En blanco # No

ADVERSE EVENTS

Did patient experience any Adverse Events? Yes No

If Yes, please record all Adverse Events in spaces provided.

Description of Event	Date Started (dd/mm/yyyy) Date Stopped (dd/mm/yyyy)	Severity 1-Mild 2-Moderate 3-Severe	Action Taken (Event) 2-No 1-Yes (Specify corrected)	Action Taken? (Study Drug or Device) 1-No Change 3-Intermittent 4-Permanently Discontinued	Relationship to Study (Drug or Device) 1-None 2-Possible 3-Probable 4-Definite	Outcome 1-Resolved 2-Resolved with expected 3-Continuing 4-Death due to this AE 5-Death due to other cause	Serious* 1-Death 2-Life threatening 3-Persistence or significant disability 4-Hospitalization initial or prolonged 5-Compromised anatomy/birth defect
1.							<input type="checkbox"/> N
Comment:	<div style="border: 2px solid red; padding: 10px; text-align: center;"> <p>WITH Indicator Q</p> <ul style="list-style-type: none"> • A record in database for every patient (query missing) • No "assumptions" about the data </div>						
2.

 OUCG 2009 45

Evitar recolectar información irrelevante para la base de datos

INCLUSION / EXCLUSION CRITERIA		
Yes	No	Inclusion Criteria
<input type="checkbox"/>	<input type="checkbox"/>	1. Patient is between the ages of 18 to 80 inclusive
<input type="checkbox"/>	<input type="checkbox"/>	2. Patient is undergoing primary TKA for joint disease of the knee
<input type="checkbox"/>	<input type="checkbox"/>	3. There is a reasonable expectation the patient will be available for each protocol required post-operative follow-up examination (investigator discretion).
<input type="checkbox"/>	<input type="checkbox"/>	4. Patient agrees to participate and sign the authorization of disclosure (HIPAA authorization).
<input type="checkbox"/>	<input type="checkbox"/>	5. Patient is in sufficient general health to participate in a surgical procedure that may last as long as 2 hours per knee (investigator discretion)
Yes	No	Exclusion Criteria
<input type="checkbox"/>	<input type="checkbox"/>	1. Knee deformity is $>12^\circ$ anatomic valgus (actual measurement _____), as measured on standing AP radiograph
<input type="checkbox"/>	<input type="checkbox"/>	2. Knee deformity is $>12^\circ$ anatomic valgus (actual measurement _____), as measured on standing AP radiograph
<input type="checkbox"/>	<input type="checkbox"/>	3. There is $>20^\circ$ flexion contracture (actual measurement _____), as measured by investigator examination.
<input type="checkbox"/>	<input type="checkbox"/>	4. Patient has poor quality skin or multiple previous incisions of surgical knee (investigator discretion).
<input type="checkbox"/>	<input type="checkbox"/>	5. Patient's body weight is >225 pounds.
<input type="checkbox"/>	<input type="checkbox"/>	6. Patient has Osteoporosis and/or Osteopenia to an extent that would create an unreasonable postoperative failure (investigator discretion).
<input type="checkbox"/>	<input type="checkbox"/>	7. Patient has previously undergone prior knee replacement (including unicompartmental or patello-femoral) on the ipsilateral side.
<input type="checkbox"/>	<input type="checkbox"/>	8. Patient is female and of child-bearing age who is pregnant or whose pregnancy status is unknown.

CRF – No!

Worksheet – Yes!

... and here's what your CRF can be ...

Evitar recolectar información irrelevante para la base de datos

INCLUSION CRITERIA

Does the subject meet ALL of the inclusion criteria? ₁ Yes ₂ No

IF NO:

Inclusion Criteria Number:

Protocol Deviation requested? ₁ Yes ₂ No

Protocol Deviation approved? ₁ Yes ₂ No

If YES, Date of Approval:
Day Month Year

This is the data you
REALLY care about –
for the CRF and the
database!

Measuring the Quality of Observational Study Data in an International HIV Research Network

Stephany N. Duda^{1*}, Bryan E. Shepherd², Cynthia S. Gadd¹, Daniel R. Masys¹, Catherine C. McGowan³

¹ Department of Biomedical Informatics, Vanderbilt University School of Medicine, Nashville, Tennessee, United States of America, ² Department of Biostatistics, Vanderbilt University School of Medicine, Nashville, Tennessee, United States of America, ³ Division of Infectious Diseases, Department of Medicine, Vanderbilt University School of Medicine, Nashville, Tennessee, United States of America

- Auditoría de datos de base de datos de red de investigadores en SIDA en LA que registra prospectivamente datos de pacientes con HIV/SIDA
- Se analizaron 7 centros en Argentina, Brasil, Chile, Haiti, Honduras, Mexico y Peru
- Se consideró error si: dato en base de datos ≠ dato en documento fuente, dato faltante, dato sin dato fuente
- Errores menores no fueron considerados en análisis

Todos los centros tuvieron algún tipo de datos con errores de > 10%

Table 3. Total number of audited variables and percentage of erroneous data by data type during initial audits at seven sites^a.

Variables	Audit Sites ^b														All N	%err
	8/11	9/11	5/11	10/11	7/11	1/11	3/11

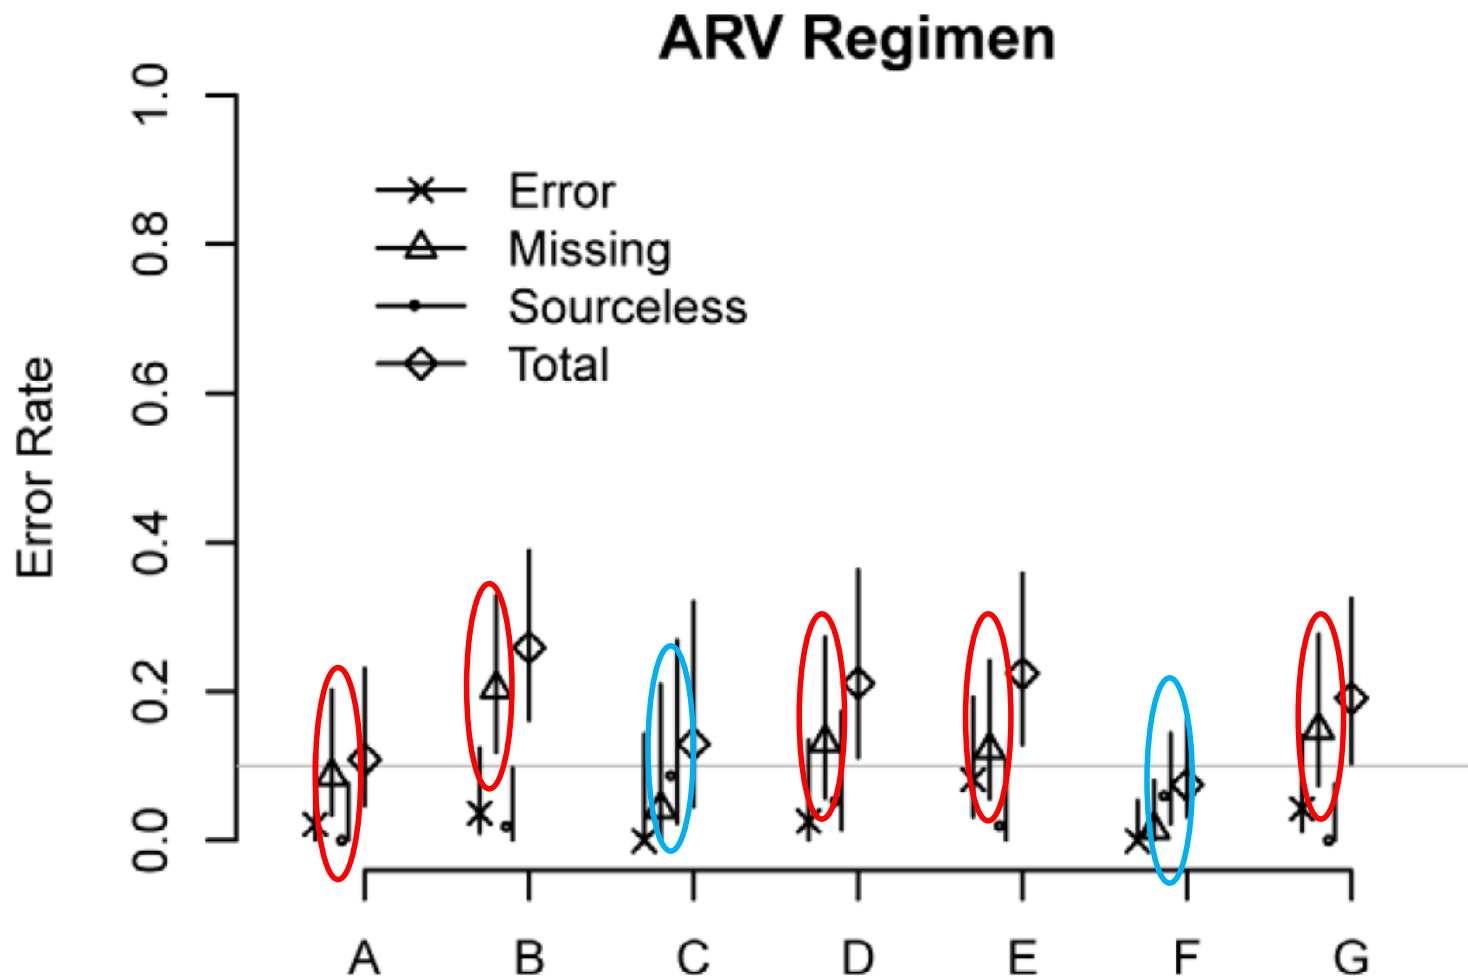

Figure 1. Error rates by error type for antiretroviral regimens.

The chart shows the rates of overall, incorrect, missing, and sourceless data errors and their 95% confidence intervals for antiretroviral (ARV) regimens. The horizontal line represents error rates of 10%.

doi:10.1371/journal.pone.0033908.g001

Causas de inconsistencia y medidas recomendadas

- Forma de registrar/mantener datos en la FC
- Forma de extraer los datos a los CRFs (entrenamiento de personal)
- Forma de extraer datos a base de datos
- *Usar formatos para las visitas médicas para evitar datos faltantes. Mantener archivos de documentos fuente*
- *Estandarizar la extracción de datos a CRFs y el entrenamiento para los data entry (ej.: fecha del laboratorio = fecha de toma de muestra # fecha de informe; peso: 56,6 = 57 kg # 56 kg)*
- *Revisar nivel de exactitud requerida para la base de datos y manejar cuando la información disponible es solo parcial (ej.: fechas)*

Impacto de auditoría

Table 4. Variable counts and error rates by data category during initial and follow-up audits at a single site.

	Initial Site Audit		Follow-up Site Audit	
	<i>N</i>	%err	<i>N</i>	%err
Variables				
Gender	23	0%	26	0%
Birth date	23	9%	26	8%
Weight	37	41%	42	26%
